PRINTING AND PHOTOGRAPHY DIVISION
WEEKLY REPORT FOR PERIOD ENDING
7 June - 13 June 1984I. Items or Events of Major Interest that Have Occurred
During the Preceding Week

A. Digital Prepress Activities: Installation began the week of 4 June on the three Atex Release 4 systems that will reside in the new P&PD Electronic Text Editing and Composition System (ETECS) computer room in GJ-66 Headquarters. Atex delivered the new interfaces to existing systems and the supporting hardware required to test peripheral devices and communications links. The coaxial cables for the new ETECS terminals for the Office of Current Production and Analytic Support (O/CPAS) use are scheduled to be installed this week.

B. Printing Support: During this reporting week, 205 printing jobs were received in P&PD. Significant jobs currently in the Bindery and scheduled for dissemination soon are the World Factbook, [redacted] and Studies in Intelligence. Other significant jobs in the early stages of the printing process are the [redacted] and the 1986 Executive Committee Review.

C. Copier Activities: The Xerox 9900 high volume copier currently available for a 60-day test in the P&PD Bindery and Reproduction Center (B&RC) is running well. Over 300,000 copies have been run on the machine in a copy center high production environment with only minor problems. The machine keeps its own log of how many sheets are copied on two sides vs. one side, how many are stapled, sorted, etc. It is demonstrating early that productivity is higher than on the traditionally used Xerox 9400 and 9500VR. Paper jams are less frequent, paper feeding is smoother, sorting is faster, and an entire intermediary step can be eliminated when performing two-sided copying. The 9900 should help expedite the increasing workload in the B&RC which currently has 335 jobs on hand.

D. Headquarters Auditorium Support: The new General Electric large screen television (LSTV) projector has been installed in the Headquarters Auditorium. Comments from the audience have been quite favorable. The previous eight year old LSTV

projector, owned by OCR, was in need of frequent repair, projected a poor quality image, was not stable with regard to tracking, and was a source of contention. The new P&PD projector, jointly funded by P&PD and OCR, has alleviated these problems.

II. Significant Events Anticipated During the Coming Week
